Technology

Gornitzky's technology and life sciences practice represents and advises a wide array of clients, ranging from global technology companies to early stage start-ups, both domestic and international, as well as funds, "angles" and other various investors in such companies.

As the market develops, our technology and life sciences practice continually grows to advise on the increasing challenges faced by our clients. Our lawyers have expertise and experience in a variety of intellectual property and technology-related transactions including all aspect of the business life cycle, such as structuring and negotiating agreements involving the development and commercialization of intellectual property assets, as well as strategic alliances, OEM, and other such corporate partnering agreements.

We deliver the full range of legal solutions to meet the needs of international software, hardware, communications, internet, life sciences and clean-tech businesses operating worldwide.

Our lawyers possess in-depth understanding and experience in structuring and negotiating information technology transactions of varying scope and complexity, from worldwide software development, licensing and outsourcing agreements, to end-user licenses.

In addition, we represent clients in a wide variety of life science transactions, including strategic licensing transactions, development and supply agreements, and technology transfer agreements.

Whilst we advise large corporations, we also work with many smaller businesses supporting them from the early stages of their fundraising and IP development and exploitation through to exit, providing operational, as well as strategic, advice.

In such an essential and highly competitive industry, we supply a Technology and Life Sciences team that is fully integrated with other practice areas, such as our tax and M&A teams and litigation department, such that our clients receive a complete service on all issues related to the high-tech and life sciences sectors.
